

### CORBY CARDBOARD RECYCLING

### KINGS CLIFFE GLASS RECYCLING

### MARCH FOOD WASTE ANAEROBIC DIGESTION

The methane produced is purified and injected directly into the national gas grid.

Electricity is generated via CHP units, powering the entire digestion process with surplus returned to the grid.

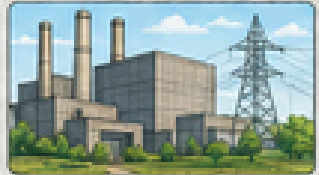

The nutrient rich digestate left over is distributed to local farmers as biofertiliser, supporting sustainable agriculture right here in the region.

PE10 9LA

**PETERBOROUGH DEPOT**  
PE1 5TP

### DONCASTER ENERGY RECOVERY

General waste is used to generate energy, reducing what goes to landfill.
